

WEEK 5 — PROFESSIONAL POWER BI DASHBOARD BLUEPRINT

Dashboard: Financial Performance & Sales Analytics

Task: Week 5 / Task 05 — Data Import, Transformation & Interactive Dashboard

Dataset: Microsoft Power BI Financial Sample

1. Dashboard structure

Use a single 16:9 page. Keep the title and date filter at the top, five KPI cards below, then trend/segment visuals, country/product visuals, and a compact performance matrix.

2. Required visuals mapped to the assignment

Requirement	Recommended visual	Fields / purpose
KPI	Card	Total Sales
KPI	Card	Total Profit
KPI	Card	Profit Margin %
KPI	Card	Total Units Sold
KPI	Card	Sales YoY %
Trend	Line chart	Date → Sales / Profit
Category	Donut chart	Segment → Sales
Comparison	Bar chart	Country → Sales
Products	Bar chart	Product → Sales or Profit
Detail	Matrix	Country, Segment, Sales, Profit, Margin
Interactivity	Slicers	Date, Country, Segment, Product

3. Build order

- Import the Financial Sample workbook or load Financials from Power BI's sample-data option.
- Clean and type-check the data in Power Query.
- Create the DAX measures supplied in this pack.
- Apply the supplied theme JSON.
- Build the KPI cards, trend, segment, country, product, matrix and slicers.
- Enable cross-filtering and verify that every slicer changes the visuals.
- Export the finished report page to PDF and save the .pbix file.
